Net Farm Income

(\$ billions)

- Farmer's Net Farm Income is forecasted to decrease ~ 16% in 2023 after two years of strong growth, primarily due to lower receipts in commodities across the board and increasing production expenses.

Debt-to-Asset Ratio

- Debt-to-Asset ratio remains near the long term average. Expected to decrease slightly from 2022.

Ag Sector Overview – Agricultural Trade

- Approximately 20%¹ of the total volume of U.S. agricultural production is exported.
- Ag trade balance is forecasted to remain negative in 2023-24, driven by lower exports across the board and increasing imports. The largest decreases in exports are projected for oilseed products, and beef imports are expected to grow.

Appendix - Commodities

- Small reductions in projected domestic use of grains increased ending stocks for 2022/23, slightly increasing their stocks-to-use ratios.
- Grain prices are expected to fall, largely due to forecasted robust production that domestic and export demand cannot absorb.
